Product Description

Pseudouridine-5-triphosphate solution is one of the most commonly used modified nucleoside triphosphates. It is mostly used as the reaction substrate or coenzyme of enzymes, such as in vitro transcription, RNA amplification, siRNA synthesis, etc. The modified mRNA containing pseudouridine has better nuclease stability and translation characteristics, and reduces its immunogenicity. It has a wide range of applications in the field of therapy and diagnosis.

This product is produced in accordance with GMP process requirements and provided in liquid form.

Product Properties
